

# A CONNECTED CAMPUS

*The new health center and cottage quad will unify the grounds and replace outdated facilities.*

The campus is **envisioned with a “spine” of green that makes it more walkable**, with beautiful paths, a bike trail, and a dramatic reduction in paving.

**New cottages will be clustered like residence halls on a college campus** around two quads, **with plenty of common space** for recreation and relaxation and better proximity to the architectural centerpiece of the campus, the new health center. The campus design will also allow JCCA more flexibility in the allocation of its facilities to its programs as enrollment numbers and populations served shift over time.

*The “spine” connects the vast campus and allows for more opportunities of recreation and togetherness*

*Over its 150+ acres, JCCA's Pleasantville Campus includes expansive lawns, athletic fields, and wooded areas—and an extensive paved road system that makes navigation from one building to another sometimes forbidding for our children. The current configuration, with Edenwald Cottages at a distance, makes the landscape feel disconnected, not to mention inefficient, for our employees and for security purposes.*

*Conversations between our architects, kids, and staff shaped our approach. Our architects' plans are modeled on the campuses of independent schools and colleges that enhance access and circulation and unify the many disparate parts of the campus landscape.*
